Has a solid background in working with relation (**MySQL**, **Postgress**) and with none relational databases (**MongoDB**).

🎓 Education

Bachelor's degree, Faculty of Technical Science(Serbia), Novi Sad

October 2015 – April 2019

Major in software engineering. The concept of studying of university is based on teaching varieties of popular languages and technologies, through group and individual projects Great aspect put on understanding software patterns and their usage in practice.

📊 Project

Application logger

The project enables applications to send their logs of different levels to our rest service. Users are able to see logs and to query through them by dates and log types. Every app is required to authenticate by jwt (Json Web Token), so it could post logs. Hole backend is done as restful stateless services using node.js.

Frameworks and node modules used:

- express (for creating rest services)
- jsonwebtoken (for creating and checking jwt tokens)
- mongoose (for creating MongoDB models
